

# ATT Mobile-APP

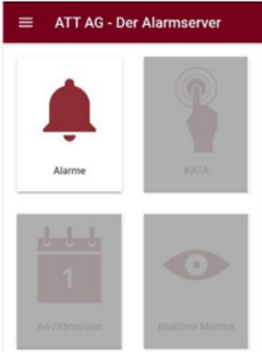

## Part 1 - Alarms

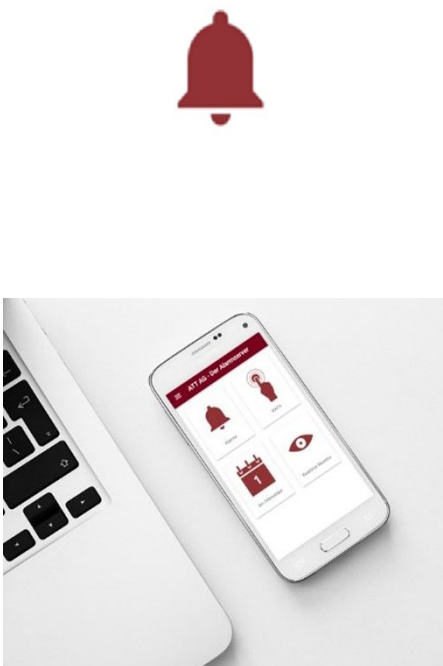

23.01

### 1 Reliable alarming with ATT Mobile-APP

In today's world, place-bound, permanent jobs are becoming increasingly scarce, and a certain degree of flexibility is required. Our ATT alerting solution therefore is oriented on sending alerts not only via PC workstations, but also via mobile devices such as smartphones.

### 2 Advantage Innovation

Description	Illustration
<p>We would like to introduce our ATT Mobile-APP in 4 parts and convince you of its advantages and innovations.</p>	

Part 1: Alarms	Illustration
<p>With the module "<b>Alarms</b>" on your ATT Mobile-APP, you can receive alarms anytime and anywhere in real time. After installation, alarms can be reliably delivered with an Internet connection on Android, IOS and Windows devices.</p> <p>The application's energy-saving push service runs in the background and ensures secure alarming by means of encrypted communication.</p> <p>Upon receiving an alarm, the recipient can "accept" or "reject" the message. All alarms are clearly displayed in a history with date/time, type of alarm and alarm starter.</p> <p>The callback function enables the recipient to start a callback quickly and easily in order to initiate any necessary measures.</p>	

## Features

- Receive alarms around the clock
- Alarm history available
- Only thing required is Internet connection via WLAN or mobile
- "Accept" or "reject" alarms directly
- App languages: German, English, French, Italian
- Application interrupts the "sleep mode"

Are you interested in our ATT Mobile-APP? We would be glad to consult by telephone or email.

Best regards,

Abdullah Toprak
